

Project Development Phase

Performance Test

Date	12-07-2026
Team ID	SWTID-2026-9948
Project Name	Heart Disease Analysis
Maximum Marks	

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	BRFSS-based Heart Disease dataset rendered with fields: Sex, Race, Age Category, Diabetic Status, Smoking, Alcohol Drinking, General Health, BMI, Heart Disease and Stroke status. All rows/columns rendered correctly across every visual.
2.	Data Preprocessing	Cleaned null/duplicate records; standardized categorical Yes/No fields (Smoking, Alcohol Drinking, Diabetic Status, Heart Disease, Stroke); binned Age into Age Category groups (18-24 through 80 or older); computed Average BMI per group (23.91 - 42.78); grouped General Health into Excellent/Very Good/Good/Fair/Poor.
3.	Utilization of Filters	Filters applied on Age Category, Gender, Race, Diabetic Status, Smoking, Alcohol Drinking, General Health, Heart Disease and Stroke for dynamic drill-down across pages.
4.	Calculation fields Used	Count of Heart Disease, Count of Stroke, Count of Id, Average BMI, and % share of Heart Disease by Race (White 75.57%, Black 17.81%, Hispanic 3.73%, remainder Asian/Other/American Indian).
5.	Dashboard design	No of Visualizations / Graphs - 11 (Gender vs Heart Disease bar chart, Diabetic vs Heart/Stroke scatter, Race-wise Heart Disease pie chart, Smoking & Alcohol Risk Factors bar chart, General Health vs Heart Disease bubble chart, Age & BMI vs Diabetic heat grid, Heart Disease/Diabetic Status/Age Category clustered bar chart, plus legends/filters).
6	Story Design	No of Visualizations / Graphs - 2 dashboard pages combined into a guided story (Previous/Next navigation) covering demographic risk factors, lifestyle risk factors, and health/BMI correlations with heart disease and stroke.
